

ETHEREUM

CryptoPack Delivery

Presented by:
Luigi di Nuzzo & Filippo Veronesi

Introduzione

CryptoPackDelivery è una dApp di Ethereum scritta in Solidity che simula la consegna di pacchi.

Ogni pacco è trattato come un NFT: infatti, al momento della creazione, viene coniato e inserito nel container. Al termine della consegna la proprietà del NFT viene trasferita automaticamente all'indirizzo del destinatario inserito nel form della web page.

Diagramma di classe

PackFactory

```
function createPack(address _receiver, uint256 _numTokens, uint _lat, uint _long) external onlyOwner {
    Coordinate memory cord;
    cord.lat = _lat;
    cord.long = _long;
    coordinateFromReceiver[_receiver] = cord;
    for(uint256 i = 1; i <= _numTokens; ++i) {
        seed = seed.add(1);
        container.push(Pack(seed, msg.sender, _receiver, false));
        uint id = container.length - 1;
        packToSender[id] = msg.sender;
        packToReceiver[id] = _receiver;
        senderPackCount[msg.sender] = senderPackCount[msg.sender].add(1);
        receiverPackCount[_receiver] = receiverPackCount[_receiver].add(1);
        emit NewPack(id, _receiver);
        mint(1, _receiver);
    }
}
```

Framework OpenZeppelin:

- **Modifier OnlyOwner**
- **Inserimento N pacchi nel container**
- **Mint di N NFT -> Payable**

PackDelivery

Al momento della consegna, viene effettuato il cambio di proprietà di address tra sender e receiver.

```
function deliver() public onlyOwner {
    address[] memory receivers = getAddressReceiver();
    uint dim = 0;
    for (uint i = 0; i < receivers.length; i++){
        uint[] memory count = new uint[](receivers.length);
        _checkDelivering(receivers[i]); //check coordinate
        count[i] = mintedPerWallet[receivers[i]];
        dim = dim + count[i];
        if(i == 0){
            for(uint j = 1; j <= count[i]; j++){
                if(ownerOf(j) == msg.sender){
                    approve(address(this), j);
                    transferFrom(msg.sender, receivers[i], j);
                }
            }
        }
        else {
            for(uint j = count[i - 1] + 1; j <= dim; j++){
                if(ownerOf(j) == msg.sender){
                    approve(address(this), j);
                    transferFrom(msg.sender, receivers[i], j);
                }
            }
        }
    }
}
